

11.4.1 Tips, Tricks, Gotcha's from Configuration to Go Live

Presenters: Crystal Vervaecke and Christy Erickson

Empowering Extraordinary Patient Care

Goal/Objectives

- **Goal:** Share information regarding all aspects of 11.4.1 upgrade from configuration to Go Live and increase success of 11.4.1 Go Live
- **Objectives:**
 - Identify 2 tasks that a client can begin prior to formal Allscripts upgrade team engagement.
 - Review key re-design changes to be considered for configuration, testing, and end user training.
 - Discuss known issues from 11.4.1 HF 1 and HF 2 testing/go live's

Design/Configuration

Where are
you today?

- Do you have a signed contract?
- Speed 2 Value or customized?
- Do you know key milestones dates or timeframes?
- Do you have it in your test system?
 - What version? Will you take more hot fixes/patches for Go live?
- Do you have documented test scripts of your workflows?
- Do you have current state test scripts?
- Do you have future state test scripts?
- Have you attended e-learning?
- Have you read resolved, known issues list, enhancement documentation?

Design/Configuration- Tips

- Ask for configuration guide/build workbook for 11.4.1 upgrade if you don't have it already
 - Pull spreadsheets from Prod to review current state, consider making changes as possible
- Begin design meetings as soon as you can
 - Document all design decisions to ease configuration
- Assign configuration tasks out to team prior to configuration week
 - Consider having the same resource who does “test” configuration perform the “Go Live” configuration
 - Have 1 owner of configuration spreadsheet
- Only load/update in SSMT what was configured for upgrade
 - Time the actual configuration time to have a baseline for go live weekend

Design/Configuration- Tricks

- **Preferences- find out what is new**
 - Pull an extract from Production now on current version paste on sheet 1 of the excel
 - Once you have completed the upgrade pull a fresh copy of preferences on sheet 2
 - Add a Sheet 3 and merge both sheet 1 and sheet 2
 - If you don't have your test upgrade yet then complete the first step and use the preference guide to review the differences
 - Consider looking at the MU stage 2 Core items for preferences as well and how items need to be configured

Design/Configuration- Tricks

- **Enhancements**

- The configuration guide supplied doesn't include enhancement configuration steps
- Review what you plan on using and add the steps to your configuration guide to ensure all items are captured in configuration for test and go live

Design/Configuration- Gotcha's

- Keywords**

- Issue Case [05448391](#)

- Order Groups- SSMT**

- Issue Case [06818985](#)

- Billing Location- date will default to 2013**

- SSMT or upgrade tech can run a script

Design/Configuration- Gotcha's

- **Carbon Copy- changes in Carbon Copy**

- New defaults and different names so it won't look exactly the same as your current version
- Issues with Allscripts defaults pulling in and overriding current defaults (06661507)

- **Noteform Assessments**

- Issue Case [06965924](#)
- Consider not using or having provider Save/Commit prior to going to the Plan section.
- Also in building think about ICD-10 and adding specificity

Testing- Tips/Tricks

- Have a documented test plan
 - http://wiki.galenhealthcare.com/Test_Plan_Development
- Spend most of your time on workflow testing
- Consider using Super Users
- Test after every patch and/or Hot Fix

Testing- Gotcha's

- **Auto Print Defaults- design change**
 - New preference: Communication methods that print default copy under Orders preference

Preference: Orders Ent/Org/User Settings: Enterprise				
Preference	SubKey	Description	Value	User Can Override
Add Clinical Item Order Selection Method Default		Add Clinical Item Order Selection Method Default	Rx-Orders	<input checked="" type="checkbox"/>
AllowManualSettingofSpecimenToBeCollectedField		Allow Manual Setting of Specimen To Be Collected Field	N	<input type="checkbox"/>
Always Present Print Dialog When Printing Requisition		Always Present Print Dialog When Printing Requisition	N	<input type="checkbox"/>
CommunicationMethodsThatDefaultPrintCopy		Communication Methods That Default Print Copy	Send to Performing Location	<input type="checkbox"/>
DaysBeforeScheduledOrderChildrenToBeDoneDateToCreateTh...		Days Before Scheduled Order Children To Be Done Date to Create Them	2	<input type="checkbox"/>
Enable Orderable Item selection by RPL filtering		Enable Orderable Item selection by RPL filtering	Y	<input type="checkbox"/>

- **Immunization Registry**
 - Immunization History requires consent, intended design
- **Rx Renew-**
 - Dosage Calculator / Split Screen
- **Clinical Summary**
 - Vitals EIE showing
 - Plan Section- Noteform naming showing
 - Depending on screen resolution users may not be able to see the Generate CS button

Associated Encounters	

Testing- Gotcha's

- Quicksets

- VOE error- random

- Order Groups

- Ordering from RX requiring to be done date

- Education

- Extra clicks

- Note Assessment

-When used in NAW can affect order entry

- Fixed in v11.4.1 HF3

Testing- Gotcha's

- Finding diagnosis
 - Unable to see certain diagnosis expected to find
 - If in the favorites will be able to use
- Previous Exam
 - Changed and requires the preference note auto-insert audit details to be set to Y
- Audit trail in Note Outputs
 - Showing under certain sections- vitals, allergies

Training- Tips

- **Develop your training plan early**
 - How will you train users, classroom/hands on, recorded, quick tip sheets?
 - What users will need to be trained?
 - How long will end user training be for each role?
- **Decide on need to know versus nice to know for training**
 - Have to know versus enhancement
- **Train based on roles**
 - Train on what that user needs, don't waste time

Training- Tricks

- Key areas for Providers: Problem Conversion, ACI changes- Blue hyperlinks, Rx Renew, Clinical Summary editing, Note changes
 - Train Super Users, involve them and get feedback on items with highest importance
- Have Rx Renew tasks generated to simulate new design
 - Upgrade tech can run a script to populate them in your test environment
- Show Problem conversion, consider using real patients for providers for a more real scenario.
 - Copy of Production and PMT conversion running- provides a more real scenario
 - Use demoblast to arrive the appt to have for Clinical Summary editing

Training- Gotcha's

- Web controls- dedicated 11.4.1 PC's (not applicable if using Citrix)
 - If having classroom training, how will users access the 11.4.1 system, controls are not backwards compatible
- PMT conversion
 - How much was mapped? Will you be able to find problems to convert?
- How will you ensure users have the knowledge prior to go live?
- What if an error pops up during training?
 - Utilize this opportunity to show users what they need to send to team for issue reporting, include in training documentation if not classroom

Go Live- Tips

- Consider a mock Go Live
- Assign out configuration prior to go live weekend
- Have all configuration spreadsheets ready by Friday of Go Live
- Have succinct test plans for testers
- Test high risk items first
- Test reported issues that got resolved during upgrade project
- Validate web controls/scan push if possible

Go Live- Tricks

- Test Rx Renewals on a real patient with a real provider
- Do you have any sites open on go live weekend, consider releasing system to them prior to Monday if possible
- Identify Go Live Blocking Issues when reporting cases on Go Live weekend
- Involve third party vendors as appropriate to validate all interfaces/ test all integration points
- Notify users and/or Super Users of any issues
- Have a central command/activation center

Go Live- Gotcha's

- Parallel Upgrade- firewall/IP issues
- Free text Preference- Order Status Reason- Free text required
- Rx Renew tasks not coming in
- Web controls
- Issue Reporting/ Communication back to end users
- Change Management

Suggestions/Questions

- **Client Connect**
- **Local Regional User Group Involvement**
- **Share Information!**
